

what's up guys welcome back to my channel if you're new here it says about

65

of you watching are new what are you doing make sure to subscribe to my channel we have a great time talking about stocks investments and things i'm doing

with my investment portfolio today i have a really exciting stock to talk about because this week joe biden is set to announce and push out his infrastructure bill and he's supposed to break it up into two different parts but this week they're supposed to be the part for infrastructure specifically for roads and buildings and also for clean energy and green energy and climate change

so this in particular is in my opinion going to really benefit a couple of stocks

that we've gone over a lot on my channel one is going to be

mp materials i think this could really help out mp materials

but the other one which i think it's going to have an even

major impact on is going to be stpk star peak energy transition corp

and their merger with stem inc so

i think this week joe biden his clean energy

bill the one that's part of the infrastructure plan is going to be huge for clean energy and if we're talking about clean energy

well then stpk and stem inc are definitely companies that in my opinion are going to do extremely well with this announcement which is supposed to come on

wednesday of this week which is going to be wednesday

um i believe march 31st

and that is in my opinion gonna have a really big impact on it

so according to fox news on sunday they said that biden will unveil his first part of

his infrastructure plan focused specifically on items

like rebuilding roads rebuilding

railways
railways also be focused on fighting
climate change some of biden's advisors
believe that dividing the package into
two different parts originally it was
supposed to be
about a three trillion dollar bill for
infrastructure that's how much
they're planning on spending in total
but they believe that dividing it into
two different parts
one for roads and bridges and for clean
energy
and the other for um other parts
that can make it much easier for the
bill to actually get passed and get some
republican support
so my opinion i think
clean energy joe biden he's been pushing
for having
zero net carbon emissions also pushing
for having
electric buses and electric vehicles all
throughout the us
the only way to have net zero carbon
emissions
sustainable energy solar panels wind
energy only way you can have more
sustainable economy
and um you know sustainable energy is by
having
star peak energy transition corp and
their technology
um which is athena and right now
their theme technology is an ai platform
that essentially tells
the energy systems when to use grid
energy versus when to use
battery powered energy versus when to
use solar panel or wind energy it
tells the system when to use different
systems depending on
like peak energy hours let's say more
energy has been used at a certain time
and they want to switch to using great
energy well then they could do that
if they want to switch because it's off
peak hours and they have energy stored
up in the system
when they can always switch to solar
panel and that is why
i think stem inc is going to be huge and
especially with this green energy and
clean

energy build specifically stem inc they came out their twitter is stem powered they came out the other day and on their twitter they said advancements in batteries along with an improved regulatory environment and more investment could make this decade the roaring 20s for energy storage in addition to them they've also come out chamath who's a billionaire investor he's also come out and said that the energy storage market is a multi-trillion dollar industry that is going to make first of all he said it's going to make the world's first trillionaire but also this specific industry he believes is going to explode over the next decade so according to power magazine they say that it could be the roaring 20s for energy storage and in their article they talk about how um they talk about how energy storage be it from batteries thermal systems mechanical storage hydrogen production any type of energy storage it doesn't matter what it is what it does they explain that the need for storage is considered paramount to the electric electrification of transportation and other businesses and continued growth in renewable energy so basically what they're saying is that analysts are saying the only way we're going to see more renewable energy resources and the economy use more sustainable energy is by having some sort of way to store it because it's no good to have solar panels if you only can use it let's say during the day when it's sunny out you need to have a way to store that energy so you can use it at other times when let's say the sun isn't out or wind when it isn't windy

how can you store that energy and use it
at other times
and that is what they're saying is going
to be paramount moving forward
according to the founder and ceo
of salient energy which is a
canada-based zinc ion battery
manufacturer
they said that the industry is still in
its infancy infancy stage it's still
very early on
but with joe biden and the
administration pushing for more
sustainable resources they believe
that's going to explode this industry
over the next couple of years
and they explain how the increasing
favorable regulatory environment
for energy storage combined with the
evolution of business models
that are bringing more capital into the
space that means the 2020s will be a
breakout decade
for the energy storage sector so right
now
they say we already are seeing companies
like amazon walmart
um and other major corporations saying
they want to be
you know net zero carbon emission
companies or they want to use
more sustainable resources all those
companies already have deals
with stem inc and their athena
technology
so in my opinion i think moving forward
this week is going to be a very big week
we'll have to wait and see what exactly
is in joe biden's plan but i think it
could cause
um stpk their stock and their merger
with
stem inc could cause this stock to
skyrocket very very soon i think we'll
easily see this stock reach a hundred
dollars per share
over the next couple of years we could
see it by the end of this year even
um they're projecting forex revenue
growth for 2020
and they're projecting to reach about
one billion dollars in revenue
by 2025. so
this company is doing extremely well and

with regulations and whatever the
government passes with this bill
could really really make this company
have a major
breakout year and i think this is gonna
be something very important to keep an
eye out on and i think it could be
something that you're definitely gonna
want to
um check out and let me know if you guys
like the company
stpk i talk about it a lot i love this
company
i love stem inc their technology with
athena their ai platform
but let me know what you guys think i
think this is gonna be a really big week
wednesday you're gonna have to keep an
eye out on what is in this
infrastructure bill but i hope you guys
enjoyed today's video
don't forget to get your four free
stocks each valued up to sixteen hundred
dollars
when you download the weeble investing
app using the link down below
i hope you enjoyed and i'll see you guys
in the next episode
you
