

hi everyone hope you're doing amazing in today's video we're talking about two stocks that have seen some crazy movement lately that is nano dimension stock ticker symbol nndm and sensonic stock ticker symbol s-e-n-s

i mean in just the last one week we've seen a similar trend in both stock price nndm is down by 10 to 8 dollars and 30 cents and cents is also down by 10 to 2.68 now yes we saw a nice jump yesterday sense was up 10 during the day and nndm was also up two and a half percent to eight dollars and forty one cents i'm sure if you've been holding on to ndm and send stock then you're probably wondering what the heck is going on and when can we expect the stock price to bounce back well nndm and sensonics both are very revolutionary in my opinion and they're working on bringing a very disruptive product to the market so in today's video let's discuss all the latest updates on nndm and sensonic stock should you buy these two stocks right now or just wait it out a little bit upcoming catalyst to keep an eye on and as always i will also give you my nndm and send stock price prediction right after this intro

[Music]

welcome back everyone if we haven't met before i am bansi here at smart money moves where we talk all things money and investing

if you find this video helpful please be sure to give it a like and also consider subscribing to join our family here it truly means a lot to me oh and feel free to follow me on instagram my ig is also in the description below

so first let's start with talking about nano dimension stock and in dm now i have made a full detailed video on nndm stock just beginning of last month and i told you guys i wasn't quite sure of nndm until this year 2021 when i finally bought the shares in

january after looking more into its technology and numbers and now i am on board with you guys i truly believe nndm is headed to another dimension i mean if you've been looking for a next big thing this my friend is it so looking at the nndm stock price it closed yesterday at eight dollars and 35 cents which was up by 1.7 and also up another 0.6 aftermarket to 8.40 mind you it was barely a dollar stock in september of 2020 and has gone up crazy 250 in last six months now if you're wondering what is nanodimension it is a leader in the highly promising 3d printing electronics industry the company is particularly focused on disrupting the pcb markets which is printed circuit boards which currently acts as a pillar of electronic devices the pcb market is currently worth around 60 billion dollars which is not surprising given how universal the technology is i think nano dimension is well positioned to disrupt this market and if they manage to gain even a small footprint in the pcb industry the company will see far more upside no doubt about it and on top of that we're talking about 3d printing pcbs which is sure to open up far more possibilities i say this because pcbs have the potential to become more complex when they're no longer confined to the 2d space now keep in mind despite its high potential nearer dimension is still in its very early stage which makes it a little bit of a risky investment and the main reason why i was skeptical to investing in it before but like it or not 3d printing pcbs are the technology of the future sure it will take some time for the industry to transition its entire infrastructure from 2d to 3d but it's coming oh yeah coming sooner than we think and recently kathy wood discussed nndm and why she holds several positions

she said and i quote nmdm has turned
itself into a broader application
3d printed technology device company one
of the important things about nano
dimension stories they're contracts
they're winning from the defense agency
we always look for where the defense is
putting their money our next generation
internet etf currently holds over
5.8 million shares of nano dimension
stock
oh and check this out nndm stock is arc
autonomous
etf's single largest holding in terms of
shares with nearly 7 million shares
owned and valued at 1.77
of total allocation now in terms of my
price prediction for nndm stock
well in the past three years nndm has
increased their revenue at a steady
price
and now as the world recovers from the
whole rona thing i think the next two
years are going to be pretty big for the
company
sure the stock has been down lately from
its all-time highs but hey remember
red days in the market are great
opportunity to
lower your dollar cost and load up on
the stock that you truly believe in
i am in nndm for the long term therefore
i'm not panicking or getting
impatient with the ups and downs in the
price i really believe that
nanodimension has the right kind of
qualities to become one of the next
big thing in tech i hate to say this but
just know that impatience
will get us nowhere in the stock market
nobody likes when the market is red but
then it's also unfair to accept it to be
green
all the time but i can see that nmdm
stock will definitely double in the next
couple months
so moving on to the second stock which
is one of my favorite penny stock that
is sessionic stock ticker symbol s-e-n-s
since stock is up crazy 600 in last six
months
no kidding that is really really good
growth for a penny
stock sense also has a market cap a

whopping 1.2 billion dollars now if you're not familiar with the company then to put it in couple lines sense is a medical device maker and its main product is continuous glucose monitoring cgm system called everSense it is truly a unique and powerful invention for people with diabetes i mean it's the world's only fda approved long-term implantable system where you can actively manage your diabetes with super ease so just recently sanseonix reported its q4 2020 and full year earnings report i covered that in my last video but what caught my eyes was their estimates for 2021 they expect net revenue for full year 2021 to be between 12 to 15 million dollars now that is four times more than 2020 revenue of 4.9 million i get it as an investor into this penny company you're probably wondering what the heck are they talking about will they really grow their revenue four times well i understand how you feel but let's talk about why i believe they will pull it off and the reason the company is poised for growth this year so just recently sensonics partnered with ascendis diabetes care which is a 10 billion dollar global leader in the diabetes technology space this is exciting news and as for the ceo it will help the company in increasing their global footprint and growing the market for ever since in 2021 and beyond we know sales are bound to grow no question about it sure in the short term with any penny stock we're going to see high volatility but i am optimistic in sensonic's groundbreaking diabetes technology and its recent big expansion it has so much potential and it can create a lot of revenue here in the us and worldwide i think they will pull it off and can double their market cap by bringing the new technology into the

market currently fda is reviewing their application for approval of a new and more advanced sensor which will last 180 days it is set to be approved by i think august 31st and this will totally change the game in the glucose monitoring system world in addition to that since joining plans to bring out 365-day sensor to market which will last full year in next couple years that's exciting now in terms of my send stock price prediction like i have said in my previous video send stock is definitely a 8 to 10 dollar stock which will rise pretty fast so take advantage of the red day in the market and buy before it hits three dollars i'm not a financial advisor but in my opinion if you were bullish before then stay bullish now no need to panic and as a reminder for any penny stock only invest if you have the stomach to ride out potential volatility never put in more money than you're willing to lose anyways that is my take on nndm and sends talk as to where both the companies are headed and their stock price in the long term hope it helped if you enjoy the video please be sure to give it a like and also subscribe to the channel for more investing videos weekly with that see you guys soon [Music]
