

neo stock has been on an absolute terror  
last year and they were one of the  
fastest growing large cap stocks of 2020  
and i think we can see more growth this  
year in 2021 the neo and tesla battle  
will only get bigger and that's what i'm  
gonna talk about today  
many government officials have done some  
questionable things like buying tesla  
calls  
and this is all very interesting we  
don't see something like this too often  
and know that 95 of all options expire  
worthless  
so their confidence means something much  
deeper in this video  
i'm going to be covering the battle  
between neo and tesla and why tesla is  
going to have a bright future for 2021  
as well as some downsides to this too i  
will also go over  
neo and where i can see them going make  
sure you subscribe and hit the bell  
you guys know i always keep a 100 with  
you and let's get right into it  
so first of all tesla has huge  
government-backed subsidies for evs  
under the new biden administration and  
backing from congress as well  
biden winning the election was a huge  
win for all eb companies  
as his administration has said from day  
one of the campaign  
that they will prioritize making clean  
energy vehicles cheaper  
whether that is electrically powered  
vehicles or even biofuel powered  
vehicles  
speaking of biofuels i talked about gevo  
and since my last video on them  
they have doubled anyway this can also  
be a bad thing for tesla in some way  
because joe biden's economic advisor  
brian diese said i quote  
we need more companies from all over the  
world to be selling ev  
so that tesla is not the only eevee  
giant and there's more of a variety of  
ev  
and one ev company doesn't become a near  
monopoly we also know that brian diese's  
company  
blackrock owns over 53 million shares of  
meal

so this affects both sides including  
tesla now tesla i believe  
will still grow by two to three times in  
the next decade but a lot of growth has  
already happened  
and if tesla goes through with their  
energy plans i can see them being a two  
trillion dollar company by 2024.  
anyone who's been following tesla since  
day one knows that their business model  
has been proved sustainable  
through primarily subsidies tesla to  
date has lended billions of dollars in  
subsidies from over 80 federal grants  
and with the recent announcements from  
joe biden that they will be announcing  
clean energy subsidies in the billions  
and possibly extending even to trillions  
of dollars it's no wonder that ev stocks  
have been pumping for the past month  
some of this has not even been priced in  
yet and this is why i've been holding a  
hundred shares for almost three years  
now on the contrary also keep in mind  
michael bury  
is shorting tesla which is a big reason  
as to why i'm just holding a hundred  
shares  
to just sell covered calls on this  
michael bury has not been wrong much  
and he is very confident with his plays  
just this week he made over 250 million  
dollars from gamestop  
so he is a very well respected investor  
and his rating means a lot for all  
companies  
both with the large market cap and small  
i want to give an alternate perspective  
and michael bury is a very bold investor  
so i value his opinion highly  
and his reasoning now regardless of  
whether you believe tesla to be  
overvalued or not  
its market cap has increased so much  
that the company has been able to  
leverage its highly increased value  
to get huge loans with extremely cheap  
interest rates  
this allows elon to continue funding  
future ventures such as nero link which  
allows him to expand the company  
into newer and newer territories to keep  
the stock going up  
it's important to understand this

phenomenon since it helps explain why a lot of companies are pumped up but never really come down because they were able to utilize their position as a blue chip company effectively now it may come as no surprise to you that congress people as a group are the people with the highest returns in comparison to the markets they have the insider information and they really know the intentions of other congressmen and political figures more than anyone else on the planet in this chart you can see that while the average american was underperforming the market u.s senators were able to do even better than the corporate insiders while members of the house of representatives were on par with them i always want you guys to be on the best and most exclusive information possible which is why i always say keep a 100 and here's the latest information for tesla nancy pelosi the speaker of the house just invested over a million dollars into just tesla stock remember that congress persons have to make their investments public and it's always important to keep track of them given their high success if you want the latest updates on this hit the bell and subscribe to my channel because my main focus extends into analyzing how government officials are going to be influencing a variety of stocks and even penny stocks every sector has a bias no matter what by these government officials and it's important to be kept up to date with this now notice how nancy pelosi is doing this right before biden announces his new evie deal we recently had him announce an all-electric eevee fleet so this sector is looking great i am taking full advantage of this for the next four years and longer and have been up by over a thousand percent with sun works or ticker symbol sun w i also have been up by over 500 with

tesla  
and could have been up even bigger if i  
dollar averaged in a little earlier  
and before tesla stock really took off  
to even above a hundred dollars  
pre-split  
anyway this allocation from the speaker  
of the house is indicative of the fact  
that there will be a heavy bias in  
congress  
to make sure that tesla receives  
government contracts and continues to  
receive the massive subsidies it does  
i'm not telling you that tesla is going  
to the moon tomorrow or in a week  
but rather that congress people are  
invested in it and have chosen them for  
the year  
it's always important to see if congress  
people own a percentage of the shares in  
a company  
since that means it's more likely to  
receive government support and is  
something that is crucial for a company  
getting subsidies and having a pullback  
period  
for these reasons tesla is poised for a  
very solid 2021 and i can see them going  
to above a thousand dollars a share  
this year even if they have a big  
pullback now real quick  
i have a very special announcement to  
make for all of you guys  
so first off my developers and business  
partners i used to work with  
have come up with a script that actually  
can predict the trend of stocks  
and can predict and analyze lots of data  
ai statistics and advanced analytics are  
the future  
and one of the coders who used to work  
at google has offered a script to me  
and us and it's not as good as the  
scripts that wall street uses but we are  
updating it each day  
to make it to that level i think it's  
very important to see what the rich  
people are doing  
and what congress people are doing  
because they have an edge over us  
no matter what so what my team has done  
is we have a web scraper for both  
congressmen and it's able to see all of  
the results on forums

including reddit quora stock tweets  
discord and even weebie  
and they have granted a license for us  
to work with them this is very  
interesting and i have used it so far  
only for bitcoin but this will be  
included in our patreon at the start of  
february  
so be sure to check out my patreon below  
if you want access to our exclusive web  
scraper  
my private portfolio as well as my penny  
stock picks and it all comes to the  
private discord  
so check it out below people in places  
of power will always have the advantage  
over us  
so we need to be able to track what they  
do with data and it's important to see  
what they do  
so we can get to them and hire  
now let's talk about neo stock now if  
you have been following the channel  
and have been here since the beginning  
you would know i have been invested in  
neo since they were valued at 12  
a share and i am still holding strong i  
own 4 400 shares of neo stock  
and think the stock has more growth to  
be made as the market cap is still under  
100 million dollars  
i think we can still see lots of growth  
by many multiples still  
and it has huge potential they are  
dominating in the largest eva market in  
the world  
which is china and they're just starting  
to get into the second largest evening  
market in the world which is europe  
they proved all of the short sellers  
wrong and even made citron report go  
extinct

[Music]

now jokes aside we have had multiple  
different price target increases  
and i even said this about two months  
ago in a video that all of these price  
targets will be increased and are biased  
because of the situation in china  
i am still very bullish on neo and don't  
plan on selling anytime  
soon i look at companies with a 20 30  
vision and always look at a stock with a  
long term lens

now if you want to trade before markets  
are even open check out the weeble link  
below  
because the early bird always gets the  
worm anyway  
feel free to subscribe and like and as  
always until  
next time
