this is not financial advice i just hope you bought your oven mitts baby because it's about to get hot in the kitchen i hope you watch your bow tie too cause it's real hot in the kitchen now let's get straight to the point hit that notification bell and subscribe to the channel and the first banger on the list is coinbase and they just came out with some news before their ipo they're trying to hype it up and hype the stock price up baby hit that patreon link so you could be up on these plays as early as we are

on these plays as early as we are and hit the weibo link so you can stop seeing these stocks run up in the pre-market without you now let's talk about it coinbase they had a post and they said this coinbase and q1 2021 it had its best quarter in the company's history now this news will likely boost the price of the shares before april 14th when it does

its direct listing why did they give this information out they want to boost the price up and get the company basically as much valuable as they possibly can get it so that's the breaking news on coinbase and they said this the profit is supposed to be between 730 million

to 800 million they did this again before

the listing they're trying to blow the price all the way up it's expected to be somewhere between

300 and 350 but this type of news let me tell you right now you might be able to expect to be even higher than that but let's keep it going the next banger on the list

is neo now let's talk about neo really briefly

what's going on with neo guess what one of these neo cars

was spotted in california no camouflage no nothing

and other than that the real news on neo is this

the et7 the first one is finally just basically all for the production line let's keep it simple like that it's all for the production line what are we doing with neo we striking to own make sure you let me know in the comments how many nil you got and how many are you trying to get baby because once they get the sedan rolling out you already know what time it is they still didn't even deliver one so we already know the business is up even if the stock price is coming down that's what you need to see so you could load up somebody asked me why isn't the hill down it's down so you could buy it that's exactly why it's down if you believe in the company long term but now let's keep it going the next banger on the list is disney ticker symbol d-i-s-n disney let me tell you this is one of the top re-opening plays in the game that you should have as a cornerstone in your portfolio just sitting there chilling and keeping you in the green when your hot stocks is down let's talk about all of the things they got going on all of the things they got going on you know what their falcon in the winter soldier show is doing numbers it had the biggest opening weekend of any streaming service show that they have on the platform with 23 of all of the streaming views and that's according to forbes this is according to forbes a reputable just institution now let's talk about what else they got going on they got a show called loki which is coming out soon and this is coming out in june if i'm not mistaken it's coming out in june and it's expected to be even bigger than falcon in the winter soldier bigger than one division and all of this other stuff now they rolling all of these out they even got something called obi-wan kenobi coming out and they just started producing that this month of april 2021 so you want to get in a play like this

long before they do anything like that you want to be in a play and then when they start releasing all of these things you want to be in it and on top of that the parks one of the biggest revenue streams that disney had was their theme parks and they're starting ticket sales for disneyland in california they starting at on april 15th and it should be open somewhere around april 30th so all of that revenue is going to be pouring right back into disney what does wall street think about this wall street had this to say 22 wall street analysts they rated this one and a consensus was this is a strong buy at the current price the price targets is this 124 in the low ain't gonna happen 208 on the median and then 230 on the high but with all of this stuff they got planned with the parks opening back up all of this happening at once this thing could blow right through that but even if it don't this would be a cornerstone of your portfolio it's time to grow up and get some real big dog stocks and have them sitting in the corner of your portfolio baby now how long we holding this one we holding this one for 10 years how we gonna play it this is a stock that you strike to own so you strike to own between 10 and 100 of these shares if not more than that but try to load up between 10 and 100 of these shares and then we're gonna hold this one for 10 years if not until retirement so you won't hold this one for the long haul baby now let's get to the next banger on the list if you want me to go to detail on any of these let me know in the comments let me know in the comments now is this it's atlas crest investment ticker simple acic now we've been talking about this one this is a special purpose acquisition company but why is it important right now guess

what it's in the 10 range right now this is important because for a special purpose acquisition company it's very rare that they ever come down below the 10 range this is the floor for them they could go down there briefly but it'll be right back up it's pretty much a floor and almost if there was ever a safe investment then buying a spec at 10 is it now on top of all of that this company has the chance to be a banger in the future and i recently did a video on this about a week ago maybe two weeks ago you might remember when i was talking about x the new etf that they got not too long ago and they included acic in there so every time somebody buys some ark x index or not index fund etf every time somebody buy that remember you know i should d straight through i keep it real i keep it raw so i mess up i keep it right with you baby let's keep it going so now every time somebody buy some arc x what are they gonna be buying a little bit of acic they're gonna buy a small percentage of a c i c now who are they for those who don't know this is a company that plans on disrupting the helicopter just basically the helicopter industry how they got these vertical takeoff and landing electric vehicles that they want you to basically fly around in the city kind of like a taxi but it's kind of like a helicopter that's quieter than normal helicopters and significantly safer cheaper to run and cheaper to operate now how we gonna play this one you're gonna use the strike price however there's basically only one because it's basically at the floor of where it can go so the strike price the preferable strike price you could get is the lowest

that it's been in a long time which is about 9.85 you could get this under 10 and it would happen extremely briefly it would be super brief that you could pick it up there but if you can consider doing so but in a ten dollar range as low as possible in the tens if you're getting a 10 on the dot great you get it under 10 even better

great you get it under 10 even better baby bow and then how long are we holding this one you want to be able to hold on to this one at least until the end of q2 2021 why because this is when the merger is supposed to happen so the few months coming up just hold on to this one for that time hold on to this one for q1 20 21 because then the hype coming up for this merger is going to either send it up

or send it up and then send it down so you want to just take it around a ride go on the wave and then consider getting out of the play baby put a stop loss on this once it starts to run you're going to put your 10 stop loss so if it comes back down guess what you pure in a profit just take it and pivot into another play so now

you could hold on to this one longer let's be clear on that you could hold on to this one longer because this one has a lot of potential to run in the future because what they're doing is actually really important and may just stop traffic from being as bad as it is

in very densely populated cities so now let's get to the next banger on the list and contrary to popular belief whenever i bring this one up i gotta let you know facebook is dominating the game i tell you every time you might not be a fan of facebook but i

bet you a fan of instagram
i bet you a fan of all these other
things that facebook owns if there was
ever a company that know how to turn
one dollar into two or squeeze a dollar
out of literally anything i'm telling
you one of them is facebook

they are a beast and barons just reported an article when they said this they said that facebook is closing in on 3 billion

users and it won't be this cheap for long that's crazy

when you consider how many people are alive this is approaching half of the human population

that's absolutely crazy that this many people

are using facebook products that that's that's crazy that's really really crazy to think about

now facebook they are four times more profitable in the last quarter than they were in the first quarter of 2021 so they even becoming more and more profitable

it's an extremely profitable business and during this pullback these last two pullbacks that we had we've been in this choppy market

guess what facebook ain't been pulling back at all it's been powering straight through it

because you know what the pullback has a lot to do

with all kind of factors related to the pain they're all kind of all kind of factors but you know what people are not easing up on facebook instagram

whatsapp none of these things they're not easing up on none of them the facebook ads

they're not easing up on them so facebook is just powering through basically all of these pullbacks so keep that one on your list

35 wall street analysts rated this one a strong buy

32 of them said it was a buy three say it was a whole and the price targets is this

28 on a low or 285 my bad on the low 344 on the median and then 385 on a high so how do we play this one we're gonna strike to own again we strike to own between five and 15 shares of this company and you already know you gotta diversify into a big dog like this so just know they know how to turn one dollar into two

so we don't hold on to this one for 10 years if not way way longer than that this is a banger it's gonna continuously be a banger so that's how we plan it and then let's get to our comment of the day and this was a special one comma today is this keenan my husband passed away in january so i picked up side hustles like doing door dash insta shopper and i invested all of the money i made during the dips i'm sure my husband is smiling down saying that's my queen with 25 shares of tesla 126 shares of neo and many many more thank you keenan i appreciate vou now with a comment like that let me tell you i hardly even know what to say i'm looking at it right now i hardly even know what to say i just want you to know that i'm extremely sorry for your loss i really appreciate you having the strength to share that with us because what you're doing is you're taking the love that your husband has for you and you transferring it to all of us you're shedding light on us and using your power that the love that he gave you had and you're using it to inspire others and that's such a big thing you're inspiring others to do what that fire inside of you is telling you and that motivation that's a beautiful thing and i appreciate you for that and i love you for that and i just love the community that we have here i swear it's it's amazing i'm telling you so i love

y'all take care
